TECHNICAL BROCHURE

SHINULIN

WETTING AGENTS - ADHESIVES

It is an organic wetting agent suitable for improving the wetting capacity of spray solution.

✓ **GUARANTEED COMPOSITION:**

A soluble liquid (SL) with 15% w/v active substance (**ethoxylated isodecyl alcohol**) and 85% w/w auxiliary substances.

Manufacturer-Packager: FARMA-CHEM SA

INTENDED ONLY FOR PROFESSIONAL USERS.

✓ **RECOMMENDED USES AND DOSAGES:**

- In a 100 L spray solution containing insecticides, organic fungicides and wetting sulphur, add 13-18 cc of SHINULIN.
- In a 100 L spray solution containing copper fungicides, add 18-25 cc of SHINULIN.
- In a 100 L spray solution containing herbicides and foliar fertilisers, add 25-30 ml of SHINULIN.

✓ **PREPARATION OF THE SPRAYING LIQUID:**

Fill the sprayer tank with water halfway. Dissolve the preparation for application in a small amount of water and pour into the sprayer tank while stirring. Add the remaining water while stirring.

SHINULIN goes last in the container, with continuous stirring.

TEMPORAL STABILITY OF PREPARATION - STORAGE CONDITIONS:

Keep in a dry, cool place in its closed original packaging. In these conditions, it remains stable for two (2) years from its manufacture date.

- *To avoid risks to human health and the environment, please follow the instructions for use.*
- ***ATTENTION:*** *Always read the label and product information before each use. See warning phrases and symbols before using the products.*
